

Globalance is an owner-managed Swiss wealth management bank. We inspire, guide and enable private clients, families and foundations to successfully invest in future-oriented companies and investments that solve global challenges and shape a positive future. With the Globalance Footprint®, we are the first bank in the world to show our clients the impact of their wealth towards economy, society and the environment. Since 20 years we are pioneers: We successfully built the world's leading asset manager for sustainable investments, SAM Sustainable Asset Management. In collaboration with Dow Jones, we also set a milestone by developing the Dow Jones Sustainability Index (DJSI).

**For a new fintech company of Globalance, we are looking for an**

## **Explorative Software Engineer (100%)**

You now have the chance to join and become a central part of our fintech initiative that are focusing on sustainability and transparency in order to make a real impact.

### **Position description**

We are looking for an explorative software engineer that will be responsible for our data aggregation services connecting hundreds of APIs and other data sources.

You are an engineer that likes hackathons. You do not only want to build software for the sake of new functionality but also want to see it being used for good purpose bringing transparency to all and help solving global challenges.

You will join a tech and product team that works as a true start-up where each of us are ready to solve any problem that may occur. It is a place where everyone's opinion is valued. Our work environment is dynamic and international with a high degree of freedom and a lot of fun.

### **Responsibilities**

- Create and maintain a scalable core framework around our bank data aggregation.
- Taking active part in exploring undocumented APIs
- Maintain the integrations central to our platform to ensure efficiency and stability.
- Guide and support our remote integration team in their daily work

## **Skills**

- Master or BS degree in Computer Science or related technical field, or equivalent practical experience.
- Experience in working with and analyzing protocols and HTTP communication.
- Experience in designing and integrating APIs.
- Experience in Java or .Net (C#) development.
- Experience with Azure or other cloud environments is a plus.

## **Character & personality**

- You do what it takes by being curious, creative and focused
- You have team spirit and high integrity
- You want to take part in solving the global challenges

## **What we offer**

- A fintech startup in the area of sustainability and financial markets
- A dynamic international work environment
- A collaborative, team-oriented leadership approach
- An attractive remuneration package & incentive scheme

## **Location**

Zurich, Switzerland

## **Questions & Applications**
